## PROFESSIONAL SUMMARY

---

**UI/UX Designer** with **7+ years** of experience working on digital products, **design systems**, and visual design. I have worked on **web apps**, SaaS platforms, dashboards, and marketing creatives across multiple industries. My main tool is **Figma**, and I also work comfortably with Adobe Photoshop, Illustrator, and the full Creative Suite.

I use **AI tools** like ChatGPT, Claude, and Midjourney regularly in my design work — for coming up with ideas quickly, writing UX copy, generating visual references, and getting feedback on my designs. This helps me work faster and produce better results. I also have basic to intermediate frontend skills in HTML, CSS, JavaScript, and React, which helps me **work closely with developers** and understand how designs get built. I am **open to full-time, contract, and freelance roles**.

## TECHNICAL SKILLS

---

**UI/UX Design:** Wireframing, Prototyping, Design Systems, User Flows, Information Architecture, Interaction Design, Usability Testing, Accessibility (WCAG), Dashboard Design, Responsive Design, Mobile-First Design

**Design Tools:** Figma (Expert), Adobe Photoshop, Adobe Illustrator, Adobe InDesign, Adobe XD, Sketch, UXPin, Zeplin, InVision, Canva

**Visual & Graphic Design:** Social Media Graphics, Marketing Creatives, Brand Identity, Print Design (Brochures, Flyers, Banners), Email Design, Presentations, Icon Design, Photo Editing, Packaging Design

**AI Tools I Use:** ChatGPT, Claude, Gemini — for ideas, UX copy, user personas, design feedback · Midjourney, DALL-E — for visual references and mood boards · Figma AI plugins — for faster layouts and suggestions

**Frontend Skills:** HTML5, CSS3 (Flexbox, Grid), JavaScript, React.js, jQuery, Tailwind CSS, Chrome DevTools, Git / GitHub

**Other Tools:** JIRA, Google Workspace, VS Code, Agile workflow, Design Handoff, Multilingual UI (English, French, Spanish)

## PROFESSIONAL EXPERIENCE

---

### UI/UX Designer & Visual Designer — Freelance

May 2025 – Present

*Independent Practice & Portfolio Projects | Delhi, India*

- **UI/UX design projects:** worked on several design projects during this time — including app redesigns where I took existing apps and improved the UI and user flow, original mobile app and web app designs from scratch, dashboard and admin panel designs, and landing page UI. All work done in Figma with proper wireframes, user flows, and final high-fidelity screens.
- **Design system practice:** built component libraries and design systems in Figma as part of my practice work — covering buttons, forms, cards, typography, colour styles, and spacing tokens. This kept my design system skills sharp and ready for real team projects.
- **Graphic and social media design:** created a variety of visual design work including Instagram posts and carousels, Facebook ad creatives, YouTube thumbnails, LinkedIn banners, brand promotional creatives, and festival and event graphics. Used Figma, Adobe Photoshop, Illustrator, and Canva depending on what the work needed.
- **Using AI tools in design work:** regularly used ChatGPT and Claude to generate user personas, write UX copy and microcopy, explore design ideas, and get quick feedback on my designs. Used Midjourney and DALL-E to create mood boards and visual references before starting the actual design. This helped me move faster from idea to final output.

- **Frontend practice:** built some UI designs in HTML, CSS, and React to check how they look and work in the browser. Also used AI tools to help generate clean code from my designs, which helped me understand the frontend side better and made it easier to communicate with developers.

## Senior Web Designer (UI/UX)

Sep 2021 – May 2025

*BOLD | Noida, India | 3 Years 8 Months*

- **Worked on multiple products:** handled UI/UX design for ResumeHelp and four other platforms — Zety, ResumeGenius, LiveCareer, and MyPerfectResume. Designed homepages, landing pages, template pages, blog pages, and email campaigns. Made sure all five products looked consistent and worked well across desktop and mobile.
- **Design system work:** managed the Figma component library which had 50+ components like buttons, forms, modals, and cards for ResumeHelp. Worked with an external design agency, reviewed their work, gave approvals, and also built components myself when developers needed something quickly.
- **Improved conversion on key pages:** redesigned several high-traffic pages to make the layout cleaner, CTAs more visible, and the overall flow easier for users. These changes helped improve the conversion rate to the resume builder by around 10 to 15 percent.
- **Designed for multiple regions:** created separate design versions for the US, French, and Spanish markets. Had to handle things like longer text in French, special characters, and small differences in layout preferences for each region.
- **Helped with QA and frontend fixes:** regularly checked the developed pages against Figma designs to make sure everything matched. Fixed small HTML and CSS issues directly when needed, which saved time and avoided back-and-forth with the development team.

## UI Designer

Jan 2019 – Sep 2021

*Avalon Information Systems | Delhi, India | 2 Years 8 Months*

- **Designed web platforms and dashboards:** created UI designs for health, education, and NGO sector clients. This included full web platforms, admin dashboards, and data-heavy screens. Focused on keeping things simple and easy to use for people who were not very tech-savvy.
- **Handled graphic and marketing design too:** along with product UI, also made marketing materials like banners, brochures, presentations, and other print and digital assets for clients. Used Photoshop and Illustrator for most of this work.
- **Wrote HTML and CSS for some projects:** built page layouts in HTML and CSS from my own designs, added jQuery-based interactions, and fixed browser compatibility issues. Used Chrome DevTools to debug styling problems and make sure the final page matched the design closely.
- **Multilingual design and teamwork:** designed English and French versions of several interfaces, managing text expansion and layout adjustments. Worked closely with frontend, backend, and product teams and used Zeplin to share design specs and stay in sync during development.

## EDUCATION

---

### B.Tech — Information Technology

2013 – 2017

*Guru Gobind Singh Indraprastha University, Delhi*

## CERTIFICATIONS

---

- Google (Coursera) — Foundation of UX Design, Create Hi-Fi Designs & Prototypes in Figma
- Uxcel — UX Design Foundations, Typography, Color Psychology, Wireframing, Accessibility
- Meta (Coursera) — JavaScript Essentials, React Basics
